

BlueBin Kanban System for Healthcare

2-bin Kanban systems for hospitals & healthcare organizations. More efficient & cost-effective with the added benefits of BlueBin's proven system and expertise.

Most Efficient, Reliable Way To Deliver Supplies

BlueBin Kanban is the most efficient, reliable way to deliver supplies. Adapted from successful manufacturing and retail industries, BlueBin Kanban is a visual replenishment system that helps ensure supplies are delivered to the right place, in the right quantity, at the right time. This process provides immediate, tangible, and measurable advances in lean growth, removing ambiguities and overcompensation of supply systems.

Guaranteed Performance

Avg reduction in recurring medical supply expense – equating to millions annually

Avg reduction in overall inventory holding costs

Overall supply chain operations efficiency gained

Reduction in space needed for supplies holding

Our clinical staff no longer worries about supplies, they simply have what they need, when they need it!

- Rick Cerceo

COO, Mercy Hospital & Medical Center

2-Bin Kanban Inventory Management System

BlueBin's Kanban system is the most efficient, reliable way to deliver medical supplies.

Standardized Inventory System

Adapted from successful manufacturing and retail industries, BlueBin's operation is a visual replenishment system that helps ensure supplies are delivered to the right place, in the right quantity, at the right time. This process provides immediate, tangible and measurable advances in lean growth, removing ambiguities and overcompensation of supply systems. Always providing sustainable continuous improvement.

Efficient

BlueBin advocates patient safety by eliminating excess and obsolete supplies as it maintains the logical units-of-measure with respect to the unpredictability of healthcare environments. By cutting waste inherent in the traditional supply replenishment process including space requirements, multiple hand-offs, and time spent waiting for orders, it increases value added time by allowing clinical staff to focus on their patients instead of supplies management.

Reliable

The BlueBin Daily Management System provides intuitive and user-friendly performance dashboards and reports to ensure long-term sustainability through data-driven decisions while continuously reducing medical-supply expenses. Daily checks and audits ensure uncompromising quality and promote long-term growth throughout your entire organization. BlueBin is not just a short term fix, its the long-term solution to your supply chain needs.

Easy to Manage

Easy to learn, easy to use. Universal standards—everyone works the same way, every day, to eliminate variance and promote continuous improvement. Supply areas are neat, clean, and designed to complement workflow.

Visual

BlueBin's kanban system gives you the ability to easily assess the status of any area and identify any issue at a glance. Clearly defined visual standards allow any employee to quickly learn and understand the system, and make replenishment a breeze.

Scalable

BlueBin's kanban does not rely on supplies kept in a central warehouse. Fill [orders can be sent directly to the manufacturer or distributor](#) with one quick scan of the bin. This enables the program to scale up or down without significant inventory holding costs.
