

Specialty Single-Use Device Reprocessing

Cardiology – Electrophysiology

Innovative Health is the leading single-use device reprocessor in cardiology and electrophysiology. We challenge traditional technological and clinical barriers to reprocessing in order to maximize the impact of reprocessing – so that physicians can access the newest technology and EP/Cath labs can provide better care to more patients.

How we are leading the market:

- Singular focus on Cardiology – our regulatory professionals and engineers are experts in cardiology
- More clearances to reprocess electrophysiology devices than any other reprocessor
- Our best performing hospital partners save more than \$500K per year in electrophysiology device costs
- Some of our hospital partners reduce their carbon footprint by more than 10,000 pounds per year
- Clinical integration specialists work with labs to align clinical, technical, and operational goals in reprocessing
- Innovation driven by proven reprocessing leaders
- Independent of manufacturers whose overall profit goals may conflict with your effort to reduce costs
- Concierge program support to maximize reprocessing savings

Innovative Health can reprocess all major brands within the following device categories:

Diagnostic EP Catheters

Mapping Catheters

Diagnostic Ultrasound Catheters

Introducer Sheaths

Transeptal Needles

Intravascular Ultrasound Catheters

Add-on Program

Innovative Health is the only reprocessor that can reduce device costs by more than \$3,000 per AFib procedure, regardless of brand preference. We offer add-on programs to labs that already work with a reprocessor, so savings can be maximized: Simply have Innovative Health collect and reprocess the devices your current reprocessor cannot reprocess.

Here is what you should demand from a single-use reprocessing partner:

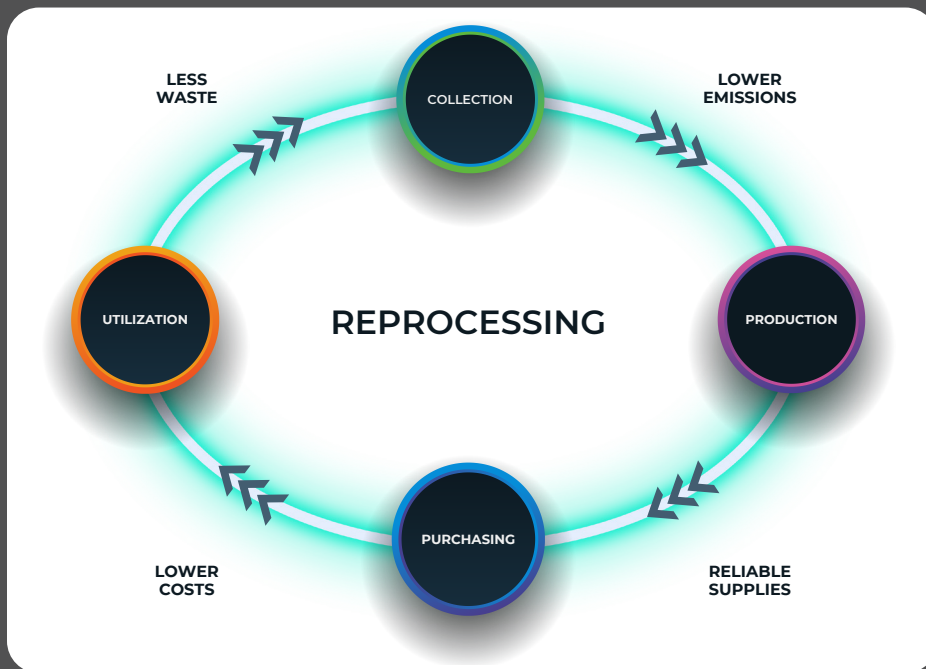

- Your reprocessing program should grow in savings every year
- Your reprocessor should share its plan for new clearances and savings increase goals
- Savings reviews should take place each quarter, so you know your results and your opportunities
- Your reprocessor should bring you new products each year
- Clinical integration specialists and savings program consultants should be assigned to your hospital
- Your reprocessing partner should guarantee a certain level of savings

Results Matter

There are only two things that really matter in a single-use reprocessing program:

1. Reprocessed devices are safe and substantially equivalent to new devices – ask your reprocessor to explain reprocessing technology, safety measures, complaint statistics, and regulatory process
2. Total savings achieved: When all is set and done, how much did you reduce costs – ask your reprocessor how they manage the many aspects that makes a reprocessing program successful

Single-use device reprocessing allows you to cut costs, improves supply chain resilience, and reduce your carbon footprint. As a leading circular solutions provider in US Healthcare, Innovative Health serves in leadership roles with the Association of Medical Device Reprocessors and the Healthcare Industry Resilience Collaborative.
